Sausage Filling Professional Reber 8973 N KG.10

Reber produces a wide range of very robust sausage filling machines with a support structure in varnished steel or in stainless steel, equipped with metal gears for reduction and multiplication of the piston speed, so as to make the sausage filling operations (slow) and the extraction of the piston at the end of the work (quick) easier and faster.

Stainless steel AISI 304 pipe, steel square bar rack (riveted bar for art. 8952 N and 8962 N) for a better power take-off surface, support for the piston in nylon 6.6, piston cover and basket in plastic material for food use.

The series of products called Professional and Vertical/Horizontal have multiplication and reduction gears closed in a stainless steel box to protect them from dust and from eventual product residues.

Reber has developed an innovative line of vertical sausage filling machines that can be used horizontally too.

Reber sausage filling machines are equipped with a series of four filling funnels of diffe

Professional 2-SPEED 8973 N - KG.10

Capacity: 10 Kg.INSACCATRICE

Speed ???

Dimensions: cm.28x28x75

Weight: Kg.23
